23/0/1

path split
MLX/Ollama/raw

Production cleanup chain latency

MLX first, Ollama fallback second, raw transcript fallback last. Warmup is excluded.

Executive Summary

This run measures the production cleanup chain after one warmup inside a single process: MLX first, Ollama fallback second, and raw transcript fallback last. Manual review remains required before changing the default provider.

Sample Results

The PDF shows the first six samples. The complete table is in report.md and production-acceptance.json.

ID	Latency	Path	Final text
01	0.164s	mlx	I think we should ship it Friday.
02	0.265s	mlx	Yeah, basically the dashboard is broken again.
03	0.192s	mlx	Can you send me the link to that doc?
04	0.209s	mlx	So I was thinking maybe we grab lunch after standup.
05	0.174s	mlx	Let's move the meeting to three thirty instead.
07	0.195s	mlx	I mean, it's probably a caching issue.

Rejected Attempt Diagnostics

The complete raw and sanitized candidates are preserved in report.md and production-acceptance.json.

ID	Provider	Latency	Outcome	Reason	Candidate
17	mlx	0.170s	rejected	protectedMarkerLoss	Yeah, the new hire starts next Monday.
