0.199s

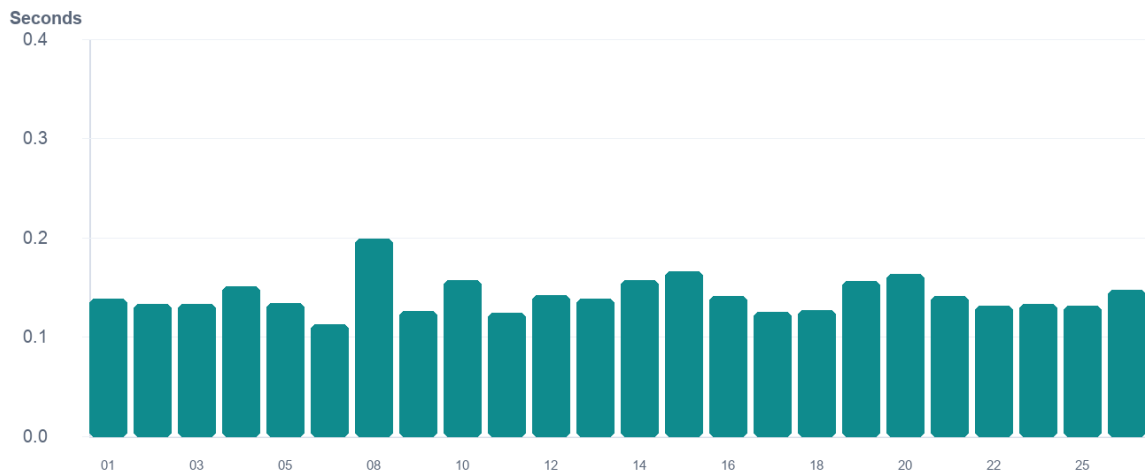

max repeated cleanup
tail observation

Swift MLX repeated cleanup latency

One model load, one warmup, then repeated cleanup calls in the same process.

median 0.139s

p95 0.166s

Executive Summary

This run measures native Swift MLX cleanup after one model load and one warmup generation. The repeated-call latency summary excludes setup cost and is the right comparison for an already-resident cleanup provider.

Sample Results

The PDF shows the first eight samples to keep the visual brief compact. The complete 24-sample table is in report.md and swift-steady-benchmark.json.

ID	Latency	Cleaned output
01	0.139s	So, I think we should ship it on Friday.
02	0.133s	Yeah, so basically the dashboard is broken again.
03	0.133s	Can you send me the link to that doc?
04	0.151s	So I was thinking maybe we grab lunch after standup.
05	0.134s	Let's move the meeting to three thirty instead.
07	0.113s	It's probably a caching issue.
08	0.199s	The query takes a long time to execute when I add the `GROUP BY` clause.
09	0.126s	Remember to follow up with Sarah tomorrow morning.
